SOUND AND PAGING SYSTEMS

One of the most important communication systems is often overlooked while planning for a new building. Not only does a well designed paging system provide great sounding background music but it is essential for emergency situations as well. It is a requirement of OSHA that all commercial buildings have in place a system that not only alerts employees of emergencies but can provide them with information to ensure a safe exit.

Today's paging systems have evolved from the days of pressing a button on an intercom and broadcasting to every speaker in a building. infinIT has partnered with major industry vendors to provide our customers with the latest technology and the most flexibility. We give our customers the ability to communicate with specific buildings, zones, departments and even employees. Systems can be integrated with telephone systems as well as the data network utilizing existing cabling and visual messaging can be integrated to meet ADA standards.

Design, installation and support of paging systems is just one more way that infinIT is your single-source vendor of choice.

Based in Waunakee, Wisconsin, infinIT llc is a leader in the structured cabling industry. We specialize in expert planning, installation and support of structured voice and data cabling, security systems, sound, paging and intercom systems and fiber optics. Our dedication to customer service is our guiding business principle.
