STRUCTURED CABLING

Attention to detail is the most essential element in designing and building a structured cabling system. From the idea stage, through installation, testing and finally implementation, details make all the difference. And those details are the key to ensuring your systems will serve you now and in the years to come.

At infinIT, we understand the importance of details. It starts in planning. Our engineers are BICSI certified and have the expertise to design a structured cabling system to meet your current and future needs. Our project management team coordinates scheduling; making sure critical deadlines are met. Our manufacturer certified technicians make sure codes are followed and that testing will exceed standards. Finally as-built CAD files are developed by a graphic designer and delivered as we turn the system over to our client.

Our attention to detail from planning through implementation is what sets infinIT apart from competitors. Providing structured cabling design, CAD services and end-to-end testing are considered consulting services by most. These services are included in every project infinIT does at no additional cost to our customer.

Because we know the importance of every detail, our customers benefit. This is what has earned us their trust, loyalty and future business.

Based in Waunakee, Wisconsin, infinIT llc is a leader in the structured cabling industry. We specialize in expert planning, installation and support of structured voice and data cabling, security systems, sound, paging and intercom systems and fiber optics. Our dedication to customer service is our guiding business principle.
